

# **Artificial Intelligence Lab Report**

*Submitted by*

**Ariz Ejaz Khan(1BM23CS051)**

**Batch: A3**

**Course: Artificial Intelligence**

**Course Code: 23CS5PCAIN**

**Sem & Section: 5A**

**BACHELOR OF ENGINEERING**  
*in*  
**COMPUTER SCIENCE AND ENGINEERING**

**B. M. S. COLLEGE OF ENGINEERING**

**(Autonomous Institution under VTU)**

**BENGALURU-560019**

**2025-2026**

**B.M.S. COLLEGE OF ENGINEERING**  
**DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**

***CERTIFICATE***

This is to certify that the Artificial Intelligence(23CS5PCAIN) laboratory has been carried out by **Ariz Ejaz Khan (1BM23CS051)** during the 5<sup>th</sup> Semester August 2025-December 2025

Signature of the Faculty In charge:

**Ms. Sandhya A Kulkarni**  
**Assistant Professor**

Department of Computer Science and Engineering  
B.M.S. College of Engineering, Bangalore

## Table of contents

<b>Program Number</b>	<b>Program Title</b>	<b>Page Number</b>
<b>1</b>	<b>Tic-Tac Toe</b>	<b>6-9</b>
<b>2</b>	<b>Vacuum Cleaner</b>	<b>10-11</b>
<b>3</b>	<b>IDDFS</b>	<b>12-14</b>
<b>4</b>	<b>8-Puzzle using A*</b>	<b>15-18</b>
<b>5</b>	<b>Hill Climbing</b>	<b>19-21</b>
<b>6</b>	<b>Simulated Annealing</b>	<b>22-25</b>
<b>7</b>	<b>Entailment in Propositional Logic</b>	<b>26-28</b>
<b>8</b>	<b>Unification using First Order Logic</b>	<b>29-33</b>
<b>9</b>	<b>Forward Reasoning in FOL</b>	<b>34-38</b>
<b>10</b>	<b>Resolution in First Order Logic</b>	<b>39-42</b>
<b>11</b>	<b>Alpha-Beta Pruning</b>	<b>43-46</b>

## Certificates

### CERTIFICATE OF ACHIEVEMENT

The certificate is awarded to

**Ariz Ejaz Khan**

for successfully completing

**Artificial Intelligence Foundation Certification**

on November 21, 2025

Issued on: Friday, November 21, 2025  
To verify, scan the QR code at <https://verify.onwingspan.com>

*Congratulations! You make us proud!*

image not available

Satheesha B. Nanjappa  
Senior Vice President and Head  
Education, Training and Assessment  
Infosys Limited

### COURSE COMPLETION CERTIFICATE

The certificate is awarded to

**Ariz Ejaz Khan**

for successfully completing the course

**Introduction to Artificial Intelligence**

on November 12, 2025

Issued on: Wednesday, November 12, 2025  
To verify, scan the QR code at <https://verify.onwingsean.com>

*Congratulations! You make us proud!*

*Satheesha B.N.*  
Satheesha B. Nanjappa

# Program-9 Forward Reasoning in FOL

## Algorithm

Forward Reasoning Algorithm

It's a conceptually straightforward, but very inefficient, forward-chaining algorithm.

On each iteration, it adds to KB all the atomic sentences that can be inferred in one step from the implication sentences of the atomic sentences already in KB.

The function `STANDARDIZE-VARIABLES` replaces all variables in its arguments with new ones that have not been used before.

function Algorithm

function `FOR-FC-ASK(KB,  $\alpha$ )` returns a substitution or false

inputs: KB the knowledge base, a set of first order definite clauses  
 $\alpha$ , the query, an atomic

local variables: new, the new sentences inferred on each iteration

repeat until new is empty  
  new =  $\{\}$   
  for each rule in KB do  
     $(P_1, \dots, P_n \rightarrow Q) \leftarrow \text{STANDARDIZE-VARIABLES}(rule)$   
    for each  $\theta$  such that `SUBST( $\theta, P_i$ )`

$\neg P_i = \text{SUBST}(\theta, P_i, 1 \dots 1, P_i)$   
    for some  $P'_1, \dots, P'_n$  in KB  
     $Q' \leftarrow \text{SUBST}(\theta, Q)$   
    if  $Q'$  does not unify with some sentence already in KB or is new then  
      add  $Q'$  to new  
       $\theta \leftarrow \text{UNIFY}(Q', \alpha)$   
      if  $\theta$  is not fail return  $\theta$   
  add new to KB  
return false

## Code

Query proved with substitution: {'y': 'Peanuts'}
```

## Algorithm

12-11-25

Resolution in FOL

Algorithm FOL-Resolution (Fig. 9)

Input:-  
 $K \cup B \rightarrow$  knowledge base (a set of FOL sentences)  
 $Q \rightarrow$  Query (sentence to be proven)

Output:-  
 True if  $K \cup B \models Q$   
 False otherwise

→ Convert all sentences in  $K \cup B$  into CNF =

- Eliminate  $\Rightarrow$  &  $\rightarrow$
- Move  $\neg$  inwards
- Standardize variables apart by renaming them each quantifier should use a different variable
- Skolemize each existential variable
- Drop universal quantifier
- Distribute  $\vee$  over  $\wedge$

→ Negate Query &  $\neg Q \rightarrow Q$  & add to KB

→ Generate Resolvents & G

→ Repeat until contradiction is found or no new clause:

- Select two clauses  $C_1$  &  $C_2$  from KB
- Resolve them together, performing

all required unifications

c2 if resolvent is empty clause, a contradiction has been found

d) If not, add the resolvent to the premises

If we succeed in step 4, we have proved the conclusion.

Initial clauses:-

- Food(x)  $\vee$   $\neg$  likes(John, x)
- Food(Apple)
- Food(Vegetable)
- Eats(x, y)  $\vee$   $\neg$  killed(x)  $\vee$  Food(y)
- Eats(Anil, Peanuts)
- killed(Anil)
- Eats(x, y)  $\vee$  Eats(Harry, y)
- Alive(x)  $\vee$   $\neg$  killed(x)
- $\neg$  killed(x)  $\vee$  Alive(x)
- likes(John, Peanuts)

Resolution steps

Contradiction found between  $\neg$  killed(x) and  $\neg$  killed(x)

So query is proved.

## Code

```
from itertools import product

# Helper function: check if a literal is negated
